

Sacramento Region 511

Warren Tighe
Siemens ITS
for Sacramento Area COG

SIEMENS

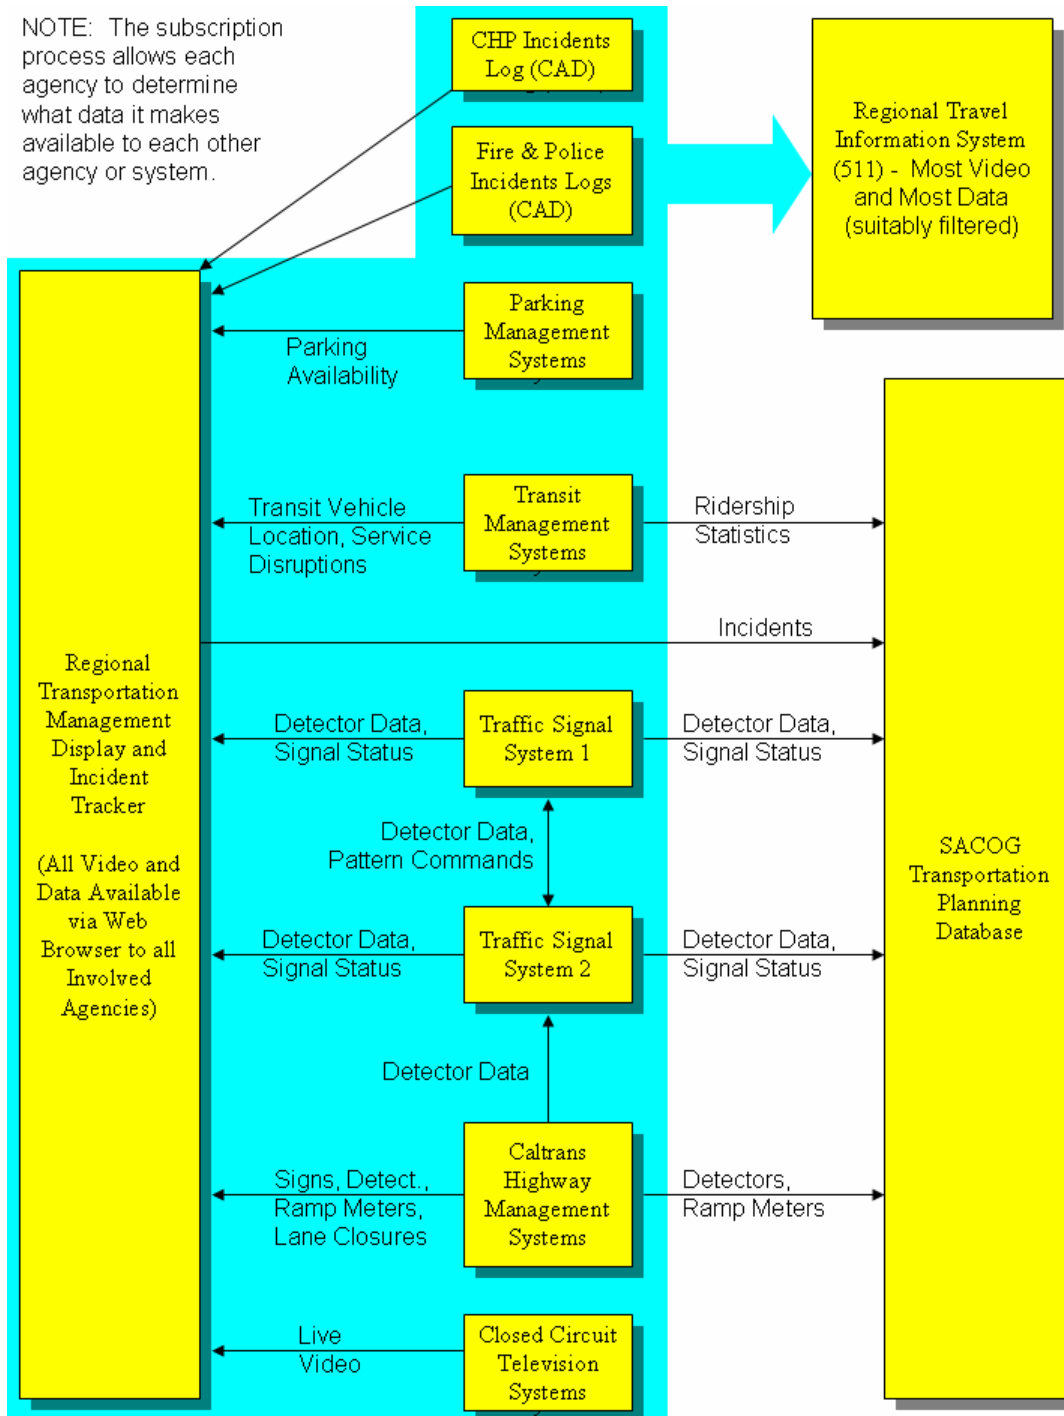

Current Sacramento Region 511

- Phone service provides only re-directions (CHIN, transit operators, carpooling, Amtrak, Bay Area 511)
- Web site is only links to BeatTheTraffic.com, CHP Incidents, Caltrans cameras, etc.
- No collection and direct dissemination of information.
- No uniform user interface for information delivery.

STARNET

- SACOG purchasing software to:
 - Collect incident information from all sources and local agency operators (traffic and transit)
 - Collect traffic flow data and automatically determine slow downs
 - Monitor light rail vehicle locations
 - Consolidate CCTV camera views (traffic and transit)
 - Facilitate information exchange and coordination between operating agencies (traffic, transit, emergency response)

NOTE: The subscription process allows each agency to determine what data it makes available to each other agency or system.

STARNET Concept

- Connect existing data sources – no new sources.
- Extract information needed by travelers and operators.
- Consolidate & make uniform.
- Allow existing agency operators to add/edit.
- Web map for operators.
- Similar map for travelers.
- Phone-ready incident information.
- Aim for quality information and ease of use.
- Allow for expansion.

Upgraded 511

- STARNET will provide data to 511 phone service and 511 web site.
- Phone will then offer area-specific traffic information by route, including incidents and slow downs, and return-to-menu.
- Also parking info for downtown garages.
- Web site will have one map for all information (traffic and transit) and cameras, with table view (list) options.
- Limited travel time information on web site.

Time Schedule

- STARNET implementation in phases during 2008-2010.
- 511 upgrade in 2008. Ready to accept information from STARNET as it becomes available.

The End

Users of Multiple 511 Systems

- Adjacent 511 phone services as menu options – call transfer.
- Publicize 10 digit number(s) – toll free?
- Information replication.
 - Independent overlapping of coverage area.
 - Information sharing/exchange.
- Systems integration.
 - Integrated menu.
 - Hierarchical or peer-to-peer?

The screenshot displays the 511 San Diego website interface. At the top, the 511 logo and tagline "Click. Call. Connect." are visible. The main navigation bar includes links for Traffic, Transit, Compass Card, RideLink, Bicycling, and FasTrak. A search bar is located on the left side. The central content area features a "Real Time Traffic Conditions" map of San Diego and surrounding areas, with a legend indicating congestion levels: No congestion (green), Heavy (red), No data (grey), Moderate (yellow), and Stop and go (black). To the right of the map is a "Current Driving Times" section listing travel times for various routes: Sorrento Valley to Oceanside (21 minutes), Downtown San Diego to Oceanside (34 minutes), Sorrento Valley to Escondido (21 minutes), Downtown San Diego to Escondido (28 minutes), and Sorrento Valley to Chula Vista (29 minutes). Below this is a "Transit Trip Planner" section with input fields for "From:", "To:", "Date:" (2/22/2008), and "Time:" (4:45 PM), along with radio buttons for "Departure" and "Arrival" and a "Plan Trip" button. The right sidebar contains several promotional banners: "Glitter with Diamond Awards", "Join a Vanpool! VPSI Commuter Vanpools 1-800-VAN-RIDE", "Celebrate Ridesharing!", "Improve Your Commute RideLink", and "Get On The FASTRAK". The footer includes the SANDAG logo, navigation links, and logos for partner agencies: Caltrans, MTS, NCTD, and SAFE.

The screenshot displays a traffic information interface. On the left is a map of the San Diego region with major highways (I-5, I-15, I-8, SR-52, SR-163, SR-54, SR-94, SR-905, SR-805, SR-78) color-coded by traffic conditions. A red box on the map highlights an incident on I-5 north of Lomas Santa Fe Dr. On the right is a live camera feed labeled 'Camera 4 in San Diego' showing traffic on I-5 at Jackson St. A 3D cartoon character is overlaid on the camera feed, pointing towards the incident location. A text box above the character reads 'Bound I-5 Just North of Lomas Santa Fe Dr'. Below the map and camera feed is a legend with a blue triangle icon for 'INCIDENTS' and a red triangle icon for 'LANE CLOSURES'. A text box at the bottom of the map area reads: 'INCIDENT - NB I-5 JUST NORTH OF LOMAS SANTA * TRAFFIC HAZARD * AREA: OCEANSIDE REPORTED AT 5:20 PM'. The top right corner of the interface shows the time 'Thu 5:20 PM 25-Jul-2007' and the logo 'GETT VIEW CABLE TV'.

- **Benefit During Wildfires**
 - Received record usage
 - Maintained 24/7 availability
 - Increase visibility from Public Officials and media
- **Issues During Wildfires**
 - Clearly and accurately depicting road conditions
 - Users expected a complete regional picture
 - Consistency of accurately classified data
 - Expected 511 Operator assistance
